

STRATEGIC LEADERSHIP ACADEMY 2021

19 – 30 July 2021 | Virtual

Managing your nuclear power plant for the long term

Successful leadership must be flexible and resilient. A virtual 2 week challenge aimed at developing nuclear leaders, this programme adopts an innovative two-fold approach to enhance participants knowledge and skills to ensure this flexibility, and facilitate developing leaders to take those skills back to their companies to promote organizational effectiveness.

A content-driven programme will expand knowledge and awareness of the key issues in plant life management (PLiM) and Long-term Operations (LTO), and give participants access to key leaders in the field alongside enhancing their holistic understanding of the many competing priorities facing nuclear leaders. In parallel, our challenge-driven, collaborative working environment will give you the chance to embed this knowledge and apply leadership skills in gamified situations based on real-life challenges faced by nuclear leaders in recent years.
